

Education Guide

Making Schools Safer
Through State-of-the-Art
AI Computer Vision

The Challenges You Face

Protecting students and staff is the number one priority – and one of the largest category of costs –for schools and education facilities who are dealing with:

Student Violence

Threats and Disruptions

Domestic Violence

School Shootings

Non-Custodial Parents

School Theft and Vandalism

Drug Activity

Limited Budget and Resources

The Numbers

113% increase in violent incidents in schools from the 2016-2017 to 2017-2018 school years*

185% increase in violent incidents in schools over the last three years, from 2016-2019*

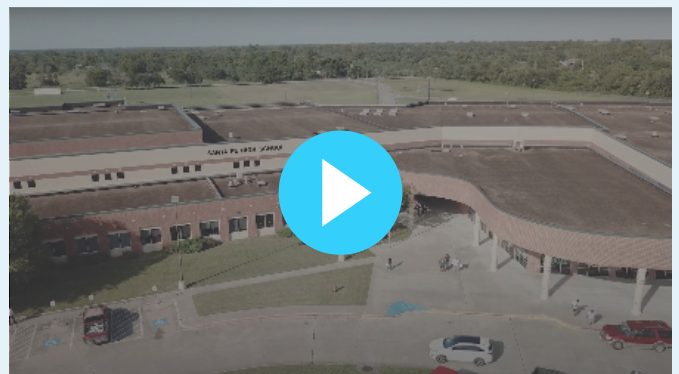

AnyVision technology is specifically proven as a measure to **prevent and respond to an increasingly wide array of threats and violent incidents on school campuses.**

Case Study

Santa Fe Independent School District

After a tragic event on one of their campuses, a public-school district in Santa Fe, Texas invested in AnyVision’s Better Tomorrow, an AI-based face recognition security solution to create a safer environment for the thousands of students, teachers and staff who populate their schools and facilities.

[See their story](#)

We have almost 700 cameras throughout the district, but if someone is not watching that camera at that time -- the camera is almost worthless.

Kip Robins, Director Technology, Santa FE ISD

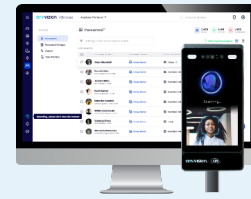

Introducing AnyVision Solutions

The World's Most Advanced AI Computer Vision Software Platform

BETTER TOMORROW
Watchlist Alerting
Advanced AI recognition security and safety solution

Touchless Access Control
Access control beyond badges and fingerprints

Our Value Proposition

AI for the Real World

AnyVision trains its algorithms in diverse, real-world conditions – low resolution videos, in occluded and low-lit environments, and with the most well-balanced data sets possible –so that our computer vision technology is agnostic to ethnicity, skin color and gender.

Technology That's Easy To Use

Keeping your security team and staff's ease of use in mind, AnyVision specializes in one-to-many recognition and designs its GUI and functionality to drive actionable insights for the real world, in real-time.

A Core Platform That's Built For Scale

Our same core platform can be scaled out to manage large numbers of sites, cameras and persons of interest –all from one center of command, giving schools the ability to integrate with IT infrastructure across campuses and facilities.

What Can Schools Do With Our Solutions?

Know when persons of interest like expelled students, non-custodial parents, and domestic violent offenders are on campus

Identify visitors; and know who is on campus at any given time – something that can be critical in emergency situations

Generate real-time alerts to drive decisions and actions to prevent or stop campus theft, violence, drug activity and more

In the event of bullying or fights, help security staff accurately piece together a timeline of events and persons involved

Enhance public safety at campus events by giving security the information they need, when they need it
